POS FUELING SYSTEM

SMART CHALOK BARAT PETRO STATION SETIU,
TERENGGANU

PREPARED BY: MOHD KHAIRUDDIN BIN HAMZAH For SMART STREAM RESOURCES SDN. BHD

PROPOSAL STANDARD FORMAT FUELING POS SYSTEM SMART PETROL STATION

- Station Information
- Register Format Receipt Printer
- Register Format Reporting Sale System
- Staff Registration
- Pump Information following Product Name and Pump Numbers
- Tank Information
- Fuel Products Pricing
- Register Fuel Stock (ATG and Manual Dipping)
- Register Reading Totalising Meter (Mechanical, Computer Pump and POS System)

PROPOSAL STANDARD "OPENING OPERATION" POS SYSTEM SMART PETROL STATION

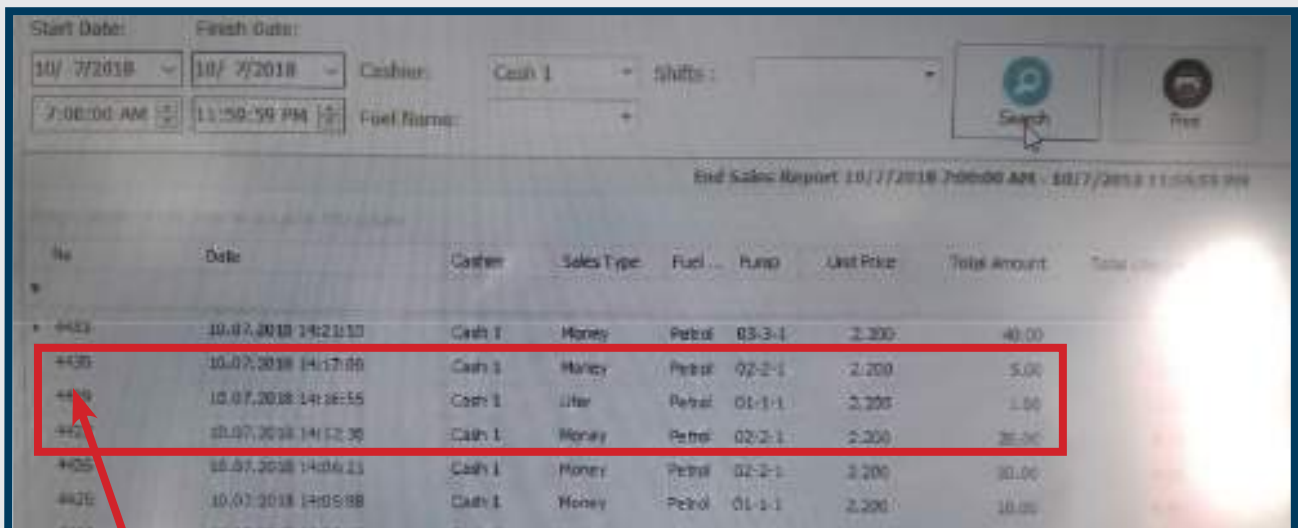

- Preparing Cash Floating
- Register Reading Totalising Meter (Mechanical, Computer Pump and POS System)
- Register/Key-in Staff ID
- Key-In Cash Floating in POS System
- Start Sale Operation
- Drop Sale Money if Balance More than RM1,000.00

PROPOSAL STANDARD "CLOSING OPERATION" POS SYSTEM SMART PETROL STATION

- Counting Money in Cash Drawer
- Register Reading Totalising Meter (Mechanical, Computer Pump and POS System)
- Closing Sale Shift/Daily Sales
- Register Reading Fuel Products Stock every Tank to update in Fuel Movement Report (Dipping Tanks Reading)
- Start /End Sale Operation
- Print POS Summary Sale Report
- Print BOS Sale Report
- Print Summary Fuel Movement Report/Fuel Sale Report

FINDING ISSUES/PROBLEMS AT POS SYSTEM SMART PETROL STATION

- All data in POS and BOS System not valid because NOT REGISTER follow procedure
- Cashier can DELETE current sales transaction at POS System
- Fuel Movement Report DON'T HAVE any data in report
- OPENING/CLOSING Fuel Report not capture with real transaction

● Cashier can **"delete"** current sales transaction at POS System.

SUGGESTION TO IMPROVISE POS SYSTEM SMART PETROL STATION

- Providing Summary Report at POS after **CLOSING SHIFT / END DAILY** Sale
- Providing Summary Report at BOS after **CLOSING SHIFT / END DAILY** Sale
- Providing Summary Fuel Sale Report "**FUEL MOVEMENT REPORT**" manual key-in
(Follow Malaysia Standard Requirement)

ELPO SYSTEM (MODULE)

PUMP AUTOMATION SYSTEM

GENERAL PROPERTIES

- Point Tracking
- Quick sales
- Vehicle License Plate Tracking
- Tracking of Sales on credit
- Sales Analysis
- Quick and easy to use
- Designable Reports
- Decision-Support Reports
- User-friendly design
- User-based customization
- Compatible equipment
- Designable Printer Output
- Records of transactions
- User Authorization according to transaction and task
- Outputs in different formats (Excel, Pdf, Txt, Xml, Image etc.)

HOW DOES PUMP AUTOMATION WORK?

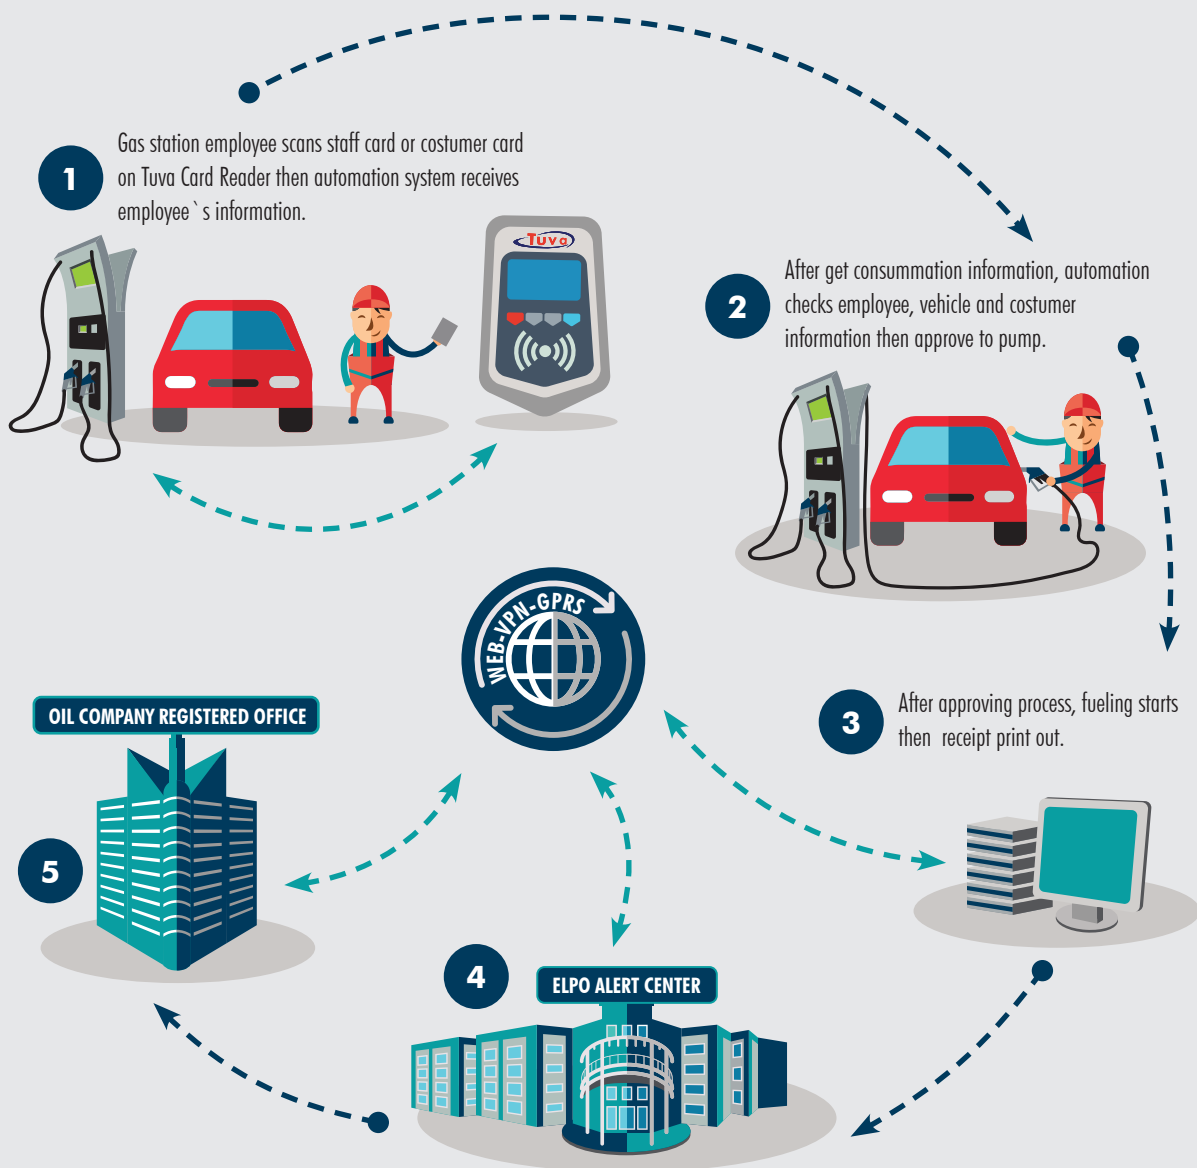

Gas station employee scans staff card or customer card on Tuva Card Reader then automation system receives employee's information.

After get consumption information, automation checks employee, vehicle and customer information then approve to pump.

After approving process, fueling starts then receipt print out.

ELPO SYSTEM (MODULE)

TANK AUTOMATION SYSTEM

Elpo Tank Automation is a software that is compatible with the Pump Automation system which prepared by Elpo Engineers. Fuel, water and temperature information in the tank are measured one second frequently and to fueling in tanks are automatically detected by electronic measurement probes which installed inside of tanks in gas stations. Tank automation and tank fuel level can be monitored & tracked instantly by station on the internet web interface and on all mobile devices. Reading values of tank fuel levels are stored parametrically as specified intervals in the database. All stored data may transmit to intended server momentarily and they also can be reported any time. On the level of need notification can be received or can insert order automatically by using Tank Automation. Inventory tracking could be under the control with record all necessary details of instant filling (fueling in tank). Further it gets as warning or alert for minimum, maximum and critical stock level and leakage status hence it takes precautions for these prospective situations.

TANK FILLING; the fillings made in the tank are recorded with all its details in electronic environment. These records are stored in database and they are available to reach any time.

TANK ALERT; Events in the tank like high temperature, low temperature, high water level, low water level, leakage etc. notified to user as warning.

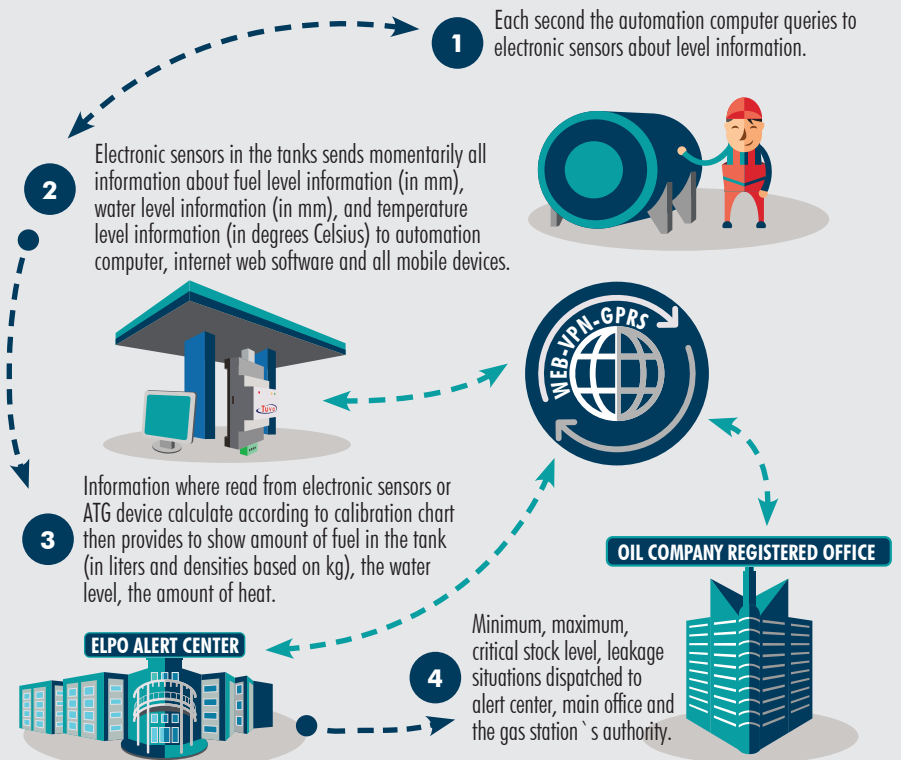

LEAKAGE INSPECTION; In case of reduction of fuel from tank without pumping or leakage cause of fitment failure detect then notified to user and alert center as warning.

MAIN CONTROL; The instantaneous data of all the tanks in a gas station can be monitored and controlled from a center place or online via mobile devices.

TANK CALIBRATION; It is a process to show the amount of fuel in the tank (liter and density in kg basis) at real values. They are displayed as 3D Laser Calibration, calibration pump, tank movements history are compared with each other or by using current calibration chart. Hence specified alarm levels work effectively. Beside this; amount of sales made by pump compare with amount of fuel exhausted from the tank then check as they are equal or not.

HOW DOES TANK AUTOMATION SYSTEM WORK?

- Each second the automation computer queries to electronic sensors about level information
- Electronic sensors in the tanks sends momentarily all information about fuel level information (in mm), water level information (in mm), and temperature level information (in degrees Celsius) to automation computer, internet web software and all mobile devices.
- Information where read from electronic sensors or ATG device calculate according to calibration chart then provides to show amount of fuel in the tank (in liters and densities based on kg), the water level, the amount of heat.
- At certain intervals it records to automation computer and sends to main server.
- Minimum, maximum, critical stock level, leakage situations dispatched to alert center, main office and the gas station`s authority.

ELPO TANK TECHNOLOGIES

- Underground Tanks
- Aboveground Tanks
- Special Purpose Tanks
- Mobile Tanks
- Container Tanks
- Vehicle Tank

TANK AUTOMATION

- Management of Fuel Stocks
- Automatic Calibration Process
- Tanks Instant Level Information
- Warning to overflow and leakage
- Provides you Unlimited Service with Comprehensible Visual Design

ELPO SYSTEM (MODULE)

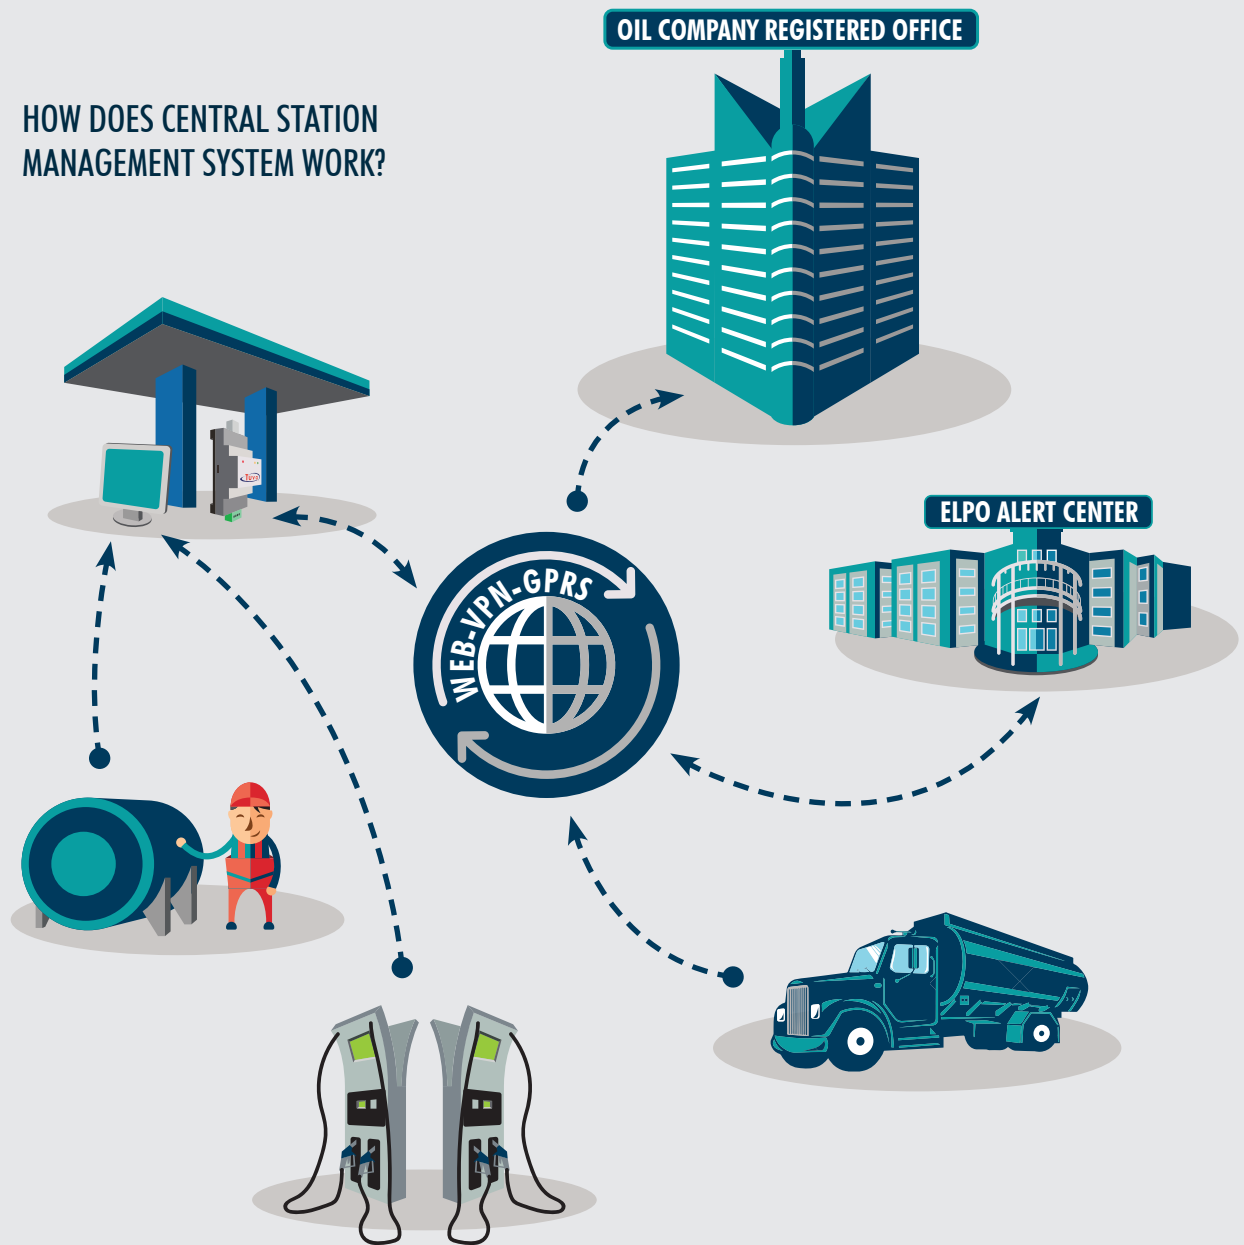

MAIN STATION MANAGEMENT DASHBOARD

Main tracking system gets information from Pump Automation, Tank Automation, Tank Truck Automation System, Vehicle Recognition System, and Customer Recognition System and it provides you to track and control each status of fuel in main office. This system which develops as it runs in internet and mobile devices by ELPO engineers allows you instant central control and reporting via software from your main office. This system works compatible with our other automations therefore it makes your analyzing and reporting process easier. You are also able to see instantly gas station's pump and tank status synchronously with the station computer.

GENERAL SPECIFICATIONS

- Feature of Making Many Data Analysis on One Screen
- Station Analysis Dashboard
- Monitoring sells from pump
- Monitoring Instant Status of Tank
- Employee Shift Tracking
- To Changing Price of Pump
- Monitoring Instant Status of Price
- Alert and Warning Tracing
- Instant Tank Filling Warning (Filling started, Filling is over)
- Tank Truck Sale Reports
- Analysis(location of gas stations on map, data consistent or inconsistent, tracking online or offline status)
- Failure Tracking (Tracking of pump, tank, automation failure and also tracking when the failure started and finished)
- Suitable for EPDK 1240 Assize
- Alert Management According to EPDK 1240 Assize Requirement
- Information of Dealers
- Consistent or Inconsistent Data Check via
- Crosstab Query
- Address book (Gas station authority and Emergency Contacts)
- Sales Assistant, Regional Director, Field Manager Analysis and Reports
- Waybill and Waybill Alignment Information
- Define Pump and Fuel Pump Gun
- Tank and Fuel Pump Gun Connections
- Management of Service Password

HOW DOES CENTRAL STATION MANAGEMENT SYSTEM WORK?

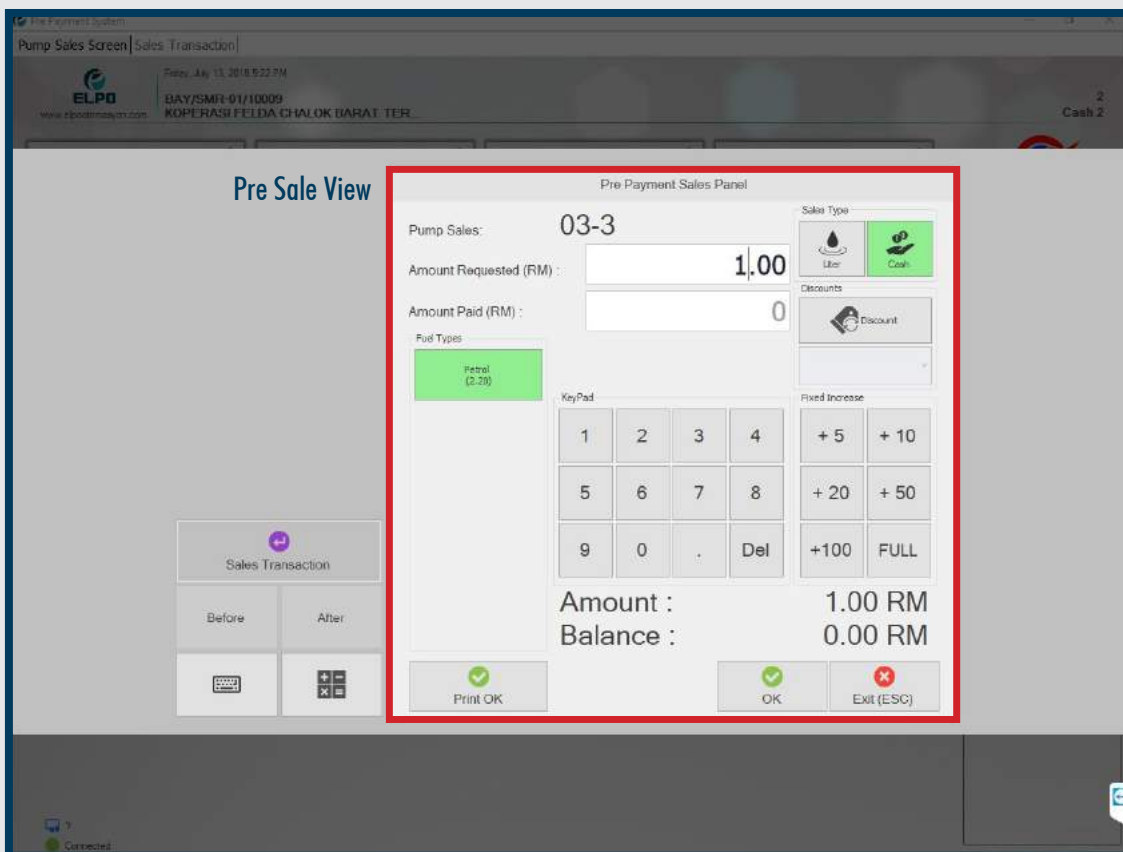

PUMP AUTOMATION SYSTEM

POS Screen View

The screenshot displays the 'Pre Payment System' interface. At the top, there is a navigation bar with 'Home', 'Actions', 'View', 'Communicate', and 'Files & Extras' options. The main content area shows a grid of eight pump sales cards, each representing a different pump ID and fuel type. Each card includes a fuel pump icon, the pump ID, the fuel type, and two columns of data: 'RM' (likely price per unit) and 'LT' (likely total volume).

POS Sale Transaction View (Authorise Transaction)

The screenshot displays the 'Pre Payment System' interface for a 'Pump Sales Screen'. The window title is 'Pre Payment System' and the active tab is 'Sales Transaction'. The interface shows a grid of transaction cards, each representing a different fuel purchase. The card for '02-2-1' is highlighted with a red box, indicating it is the selected transaction for authorization. The interface also includes a header with the ELPO logo, the date and time (Friday, July 13, 2018 4:51 PM), and the location (BAY/SMR-01/10009 KOPERASI FELDA CHALOK BARAT TER...). A 'smart' logo is visible on the right side of the interface. A status bar at the bottom left shows a 'Connected' indicator.
